Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: Expression of a maize sucrose phosphate synthase in tomato alters leaf carbohyd A;Reference number: JQ1329; MUID:92338837; PMID:1840396
A;Accession: JQ1329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Molecule type: protein
Residues: 71-74;206-212,471-481,872-892 <WOR1>
Residues: 71-74;206-212,471-481,872-892 Group from UDBglucose to fructose-6-phosph
Moment: This enzyme transfers the glucosyl group from UDBglucose to fructose-6-phosph
(Comment: This enzyme is involved in the regulation of carbon partitioning in the leave
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description: catalyzes the formation of sucrose-6-phosphate from UDPglucose and D-fruc
                                                                     B.; Herrera-Estrella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description: catalyzes the formation of sucrose-6-phosphate from UDPglucose and D-fruc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pathway: sucrose biosynthesis

T. GARALYTT ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP +

C. CATALYTT ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP +

Dhosphare + L-glutamare + carbamoyl phosphare.

C. CATALYTA Arginine biosynthesis.

C. PATHWAY: Arginine biosynthesis.

C. PATHWAY: Pyrimidine biosynthesis, the small (or glutamine) chain

promotes the hydrolysis of glutamine to ammonia, which is used by

the large (or ammonia) chain to synthesize carbamoyl phosphate (By

similarity).

C. SIMILARITY: Belongs to the carB family.

The gene. The control of the control of carbon partitioning in the control of plants. May regulate the synthesis of sucrose and leaves of plants. May regulate the synthesis of sucrose and therefore play a major role as a limiting factor in the export of control of photosasimilates out of the leaf.

CC TALALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP + sucrose 6-phosphate.

CC -I CATALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP + sucrose 6-phosphate.

CC -I ENZYMB REGULATION: Activity regulated by phosphorylation and moderated by concentration of metabolites and light.

CC -I PATHWAY: Sucrose synthesis.

CC -I PATHWAY: Sucrose synthesis.

CC -I PATHWAY: Homodimer or homoterramer (By similarity).

CC -I PATHWAY: Belongs to the glycosyltransferase family 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SMISS-PROT entry is copyright. Inalysis of cDNA clones encoding sucrose-phosphate synthase in
relation to sugar interconversions associated with dehydration in the
relation to sugar interconstains associated with dehydration in the
Plant Physiol. 115:113-121(1997).
I. FONGTION: Involved in the regulation of carbon partitioning in the
leaves of plants. May regulate the synthesis of sucrose and
therefore play a major role as a limiting factor in the export of
photoassimilates out of the leaf.
I. PATALYTIC ACTIVITY: UDP-glucose + D-fructose 6-phosphate = UDP +
sucrose 6-phosphate.
I. PAZYME REGULATION: Activity regulated by phosphorylation and
moderated by concentration of metabolites and light.
I. PATHWAY: Sucrose synthesis.
I. PATHWAY: Sucrose synthesis.
I. PATHWAY: Homodimer or homocetramer (By similarity).
II PTM: Phosphorylated. However, phosphorylation is not essential for
enzyme function (By similarity).
II PTM: Phosphorylated. However, phosphorylation is not essential for
enzyme function (By similarity).
II SIMILARITY: Belongs to the glycosyltransferase family 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. -1- TISSUB SPECIPTCITY: Eye disks and ovaries.
-1- DEVELOPMENTAL STAGE: Expressed both maternally and zygotically.
-1- SIMILARITY: Belongs to peptidase family C19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"In vitro binding of nuclear proteins to the barley plastocyanin gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     promoter region.";

Bur. J. Biochem. 217:97-104(1993).

-!-FUNCTION: Participates in electron transfer between P700 and the cytochrome bef complex in photosystem I.

-!-SUBCELLULAR LOCATION: Loosely bound to the inner thylakoid membrane surface in chloroplasts.

-!-SIMILARITY: Contains 1 plastocyanin-like domain.
                                                                             Gaps

Di-17, where it confers resistance to Turnip Crinkle Virus uppon recognition of the viral capsid protein.

-!- SIMILARITY: Belongs to the disease resistance NB-LRR family.
-!- SIMILARITY: Contains 2 leucine-rich (LRR) repeats.
-!- SIMILARITY: Contains 1 NB-ARC domain.
-!- DATABASE: NAME-NIB-LRRS,
-!- DATABASE: NAME-NIB-LRRS,
-!- NOTE-Functional and comparative genomics of disease resistance gene

Ren T. Gapsid protein to confer resistance to turnip crinkle virus.";
Plant Cell 12:1917-1926(2000).
I- FUNCTION: Disease resistance protein. Resistance proteins guard
the plant against pathogens that contain an appropriate avirulence
protein via an indirect interaction with this avirulence protein.
That triggers a defense system including the hypersensitive
response, which restricts the pathogen growth. The interaction
with TIP (TCV-interacting protein) may be essential for the
recognition of the avirulence proteins, and the triggering of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isode_08044J9-2; Sequence=VSP_007171, VSP_007172;
Note=Has been shown to exist only in cv. Columbia so far;
Note=Has been shown to exist only in cv. Columbia so far;
DOMAIN: The LRR repeats probably act as specificity determinant of
pathogen recognition.
POLYMORPHISM: The strong polymorphisms present in cv. Di-17 and
cv. Columbia are probably due to an unequal crossing-over between
the highly related RPPs and RPH8A genes present in cv. Landaberg
erecta. Such variations probably modify the specificity of

That briggers a defense system including the hypersensitive protein guard the plant against pathogens that contain an appropriate avirulence protein via an indirect interaction with this avirulence protein.

That triggers a defense system including the hypersensitive response, which restricts the pathogen growth. In contrast to RPB, it does not specifically recognize the Bmco5 avirulence protein from Peronospora parasitica.

"NESCELLANEOUS: In ov. Columbia and cv. Di-17, this protein is not present due to an unequal crossing over between the RPPB and RPBHA present due to an unequal crossing over between the RPPB and RPBHA consent that creates a unique RPBB gene.

"SIMILARITY: Belongs to the disease resistance NB-LRR family.

RPBB/HRT subfamily.

"SIMILARITY: Contains 2 leucine-rich (LRR) repeats.

"SIMILARITY: Contains 2 leucine-rich (LRR) repeats.

"SIMILARITY: Contains 1 NB-ARC domain.

invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protesse. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents a peptide compound of the invention having the hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketcoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        'note= "Norvalyl carbonyl forming keto-amide linkage with

The peptides of the invention are alpha *ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ptide compound having hepatitis C virus protease inhibitory useful for treating disorders associated with hepatitis C virus

```
The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C virus
                                                                                                                   /note= "Valyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Norleucyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                       /note= "2-aminoisobutyryl carbonyl residue forming a keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                          Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide; virucide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #47.
                                                                                                                                                                                                                                                                                                                                                                                                            96.2%; Score 50; DB 5; Length 11; 100.0%; Pred.                                                                                                                                                    The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide; virucide.
                                                                             Novel peptide compound having hepatitis C virus protesse inhibitory activity useful for treating disorders associated with hepatitis C ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #39

The sequence represents a peptide compound of the invention having the peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis C virus, HCV; serine protease, inhibitor, alpha-ketoamide, virucide.

The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                     'note= "Alpha-propynyl-glycinyl-carbonyl residue forming keto-amide linkage with residue 7"

The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HGV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketcamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                         /note= "Norvalyl carbonyl forming keto-amide linkage with-residue 7"
                                                                                                                                                                                                                                                                                                                                                                           ptide compound having hepatitis C virus protease inhibitory useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of invention are alpha-keroamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture as medicament to trat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredist useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;
                                                                                                                                                                                                                                                                                                                                                                                   Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C ^\circ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6

```
The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C virus protease.

Sequence 7885, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRESENTE GF09-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 7885
LENGTH: 1407
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 us-us-ve-ve-lobblication US/09760946

US-08-871-355A-236

Sequence 236, Application US/08871355A

Patent No. 6015669

Patent No. 6015669

TITLE OF INVENTION: Identification of Genes
NUMBER OF SEQUENCES: 501

CORRESPONDENCE ADDRESS:
ADDRESSER: Patrea L. Paber

STREET: 1201 West Peachtree Street

CITY: Atlanta

COUNTRY: USA

ZIP: 3009-348

ZIP: 3009-348

COUNTRY: USA

ZIP: Flopy disk

COMPUTER READALE FORM:
MEDIUM TYPE: Flopy disk

COMPUTER PEALABLE FORM:
MEDIUM TYPE: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/871,355A

FILING DATE: 09-JUN 1997

CLASSIFICATION: 435

PRIOR APPLICATION 1435

CLASSIFICATION: 435

Sequence 66, Application US/09357952

Patent No. 6248904

GENERAL INFORMATION:

APPLICANT: Zhang, Han-Zhong

APPLICANT: Cai, Sui Xiong

APPLICANT: Drewe, John A.

TITLE OF INVENTION: No. 6248904e1 Fluorescence Dyes and Their Applications for Whole

TITLE OF INVENTION: Pluorescence Screening Assays for Caspases, Peptidases, TITLE OF INVENTION: Other Enzymes and the Use Thereof

FILE REFERENCE: 1735.0030001

CURRENT APPLICATION NUMBER: US/09/357,952

CURRENT FILING DATE: 1999-07-21

EARLIER APPLICATION NUMBER: US 60/093,642
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps
